STUDY OF FSA STANDARD LOAN RR BORROWERS: REGION IV

Part 1. Characteristics of Borrowers,
Progress of Borrowers, and
Action for Rehabilitation

Tabulated Data for Administrative Use Only

Washington, D. C. April 1943

INTRODUCTION

This set of tabular data with brief explanatory text is intended to make available for administrative use the results of certain tabulations from the study of Farm Security Administration standard loan rural rehabilitation borrowers. The tables in this set contain more detailed data than presented in the administrative memoranda which have been prepared to present the results of the study for all Regions combined. This study was made in each of the 12 FSA Regions by the Bureau of Agricultural Economics with the assistance of a Nation-wide MPA project and was initiated at the request of the Farm Security Administration.

Purpose of study. The study was designed to utilize existing records for standard loan rural rehabilitation borrowers (1) to ascertain the characteristics of borrowers at the time of entering the RR program, their experience during the year before entry, and the trends in types of borrowers selected, (2) to learn the progress of the borrowers since entering the RR program, (3) to analyze the action taken to facilitate rehabilitation, and (4) to analyze the factors associated with success or failure in rehabilitation.

The sample. In Region IV, 5,743 borrowers were studied. The sample represents approximately 20 percent of all standard loan RR borrowers in the Region whose first standard RR loan was authorized between March 1, 1936 and February 23, 1939, and who, in addition, had not received an emergency loan before March 1, 1936.

Source of data. All data were obtained from records already available in the regional FSA office; there were no personal interviews with borrowers nor was there any checking back to the county offices. Records consulted included the following: Kardex, application for initial loan; farm and home plans, including "report of last year's business"; leases; debt-adjustment forms; and grant, loan, and collection records, including loan agreements and extensions or renewals; and correspondence.

To the extent that the available records permitted for the period covered by the study, data were obtained for both plan and performance for each year after the borrower's entry on the standard RR program as well as for performance during the year before entry on the program. No record of performance for the farm and home activities after entry on the program was available for 47.5 percent of the sample borrowers in Region IV for whom such a record was expected; this percentage excludes those for whom no record was expected because the borrower received the first loan too late to complete a crop year before the end of the period covered by this study.

A borrower was considered as having a record of performance after entry on the program if a farm and home plan was available which as made out some time after the first standard loan was received. Linely-seven percent of the borrowers for whom no record of performance was available, although expected, had received only one standard loan. Alto, 20 percent of those with no performance record were paid up or inactive by the end of the period covered by the study. Loan, collection, and grant data were, of course, available for all borrowers but such data were not considered as constituting a record of performance for the purposes of the study.

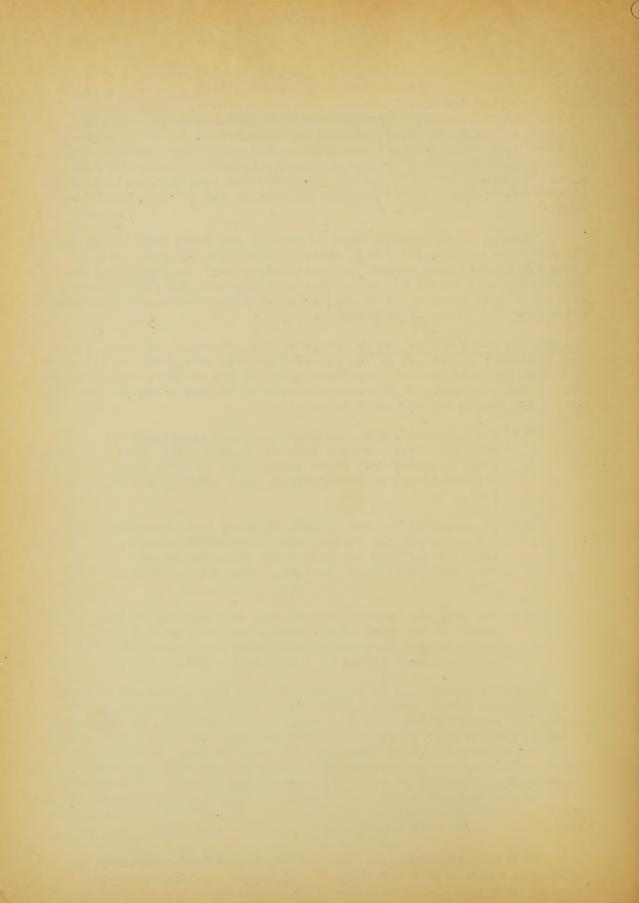

Because of the changes made in some of the forms used by FSA during the period covered by the study, certain items such as actual finily operating expenses and actual net cash income were available from the records for only a part of the borrowers, while data for still other items, such as certain types of livestock, were not comparable on all the forms which were the source of information.

Precautions recessary in use of tabulated data.-Perhaps the first precaution necessary in the use of the information from this study is to recognize that the data are not comparable with the FSA annual progress reports because the same group of FSA standard loan RR borrowers has not been sampled. The sample differs in these ways:

- (1) The progress reports include borrowers regardless of when the first standard loan was received but this study included only those whose first standard loan was authorized between March 1, 1936 and February 28, 1939.
- (2) The progress reports include standard loan borrowers without regard to whether they received emergency loans at any time but this study excluded any borrower who received an emergency loan before march 1, 1936.
- (3) The progress reports include only borrowers in active status at the time of the report but 13.7 percent of the borrowers included in this study for Region IV were no longer active by February 28, 1939.

A second precaution is to recognize that information about change in economic and social status, progress and failure since entry on the program, is available for only 47 percent of the borrowers in the Region IV sample and for only 52 percent of the borrowers for whom a record of change was expected. It is therefore not known whether the borrowers for whom no record of change was available, although expected, had more progress, more failure, or about the same change as those for whom records of change were available for this study. In contrast, the progress reports secure and of performance after entry on the program for all borrowers sampled as the data are secured to county offices.

Farm Security Administration policy, administrative procedures, changes in price levels and "act of God," such as drought, are all reflected in the tabulated data.

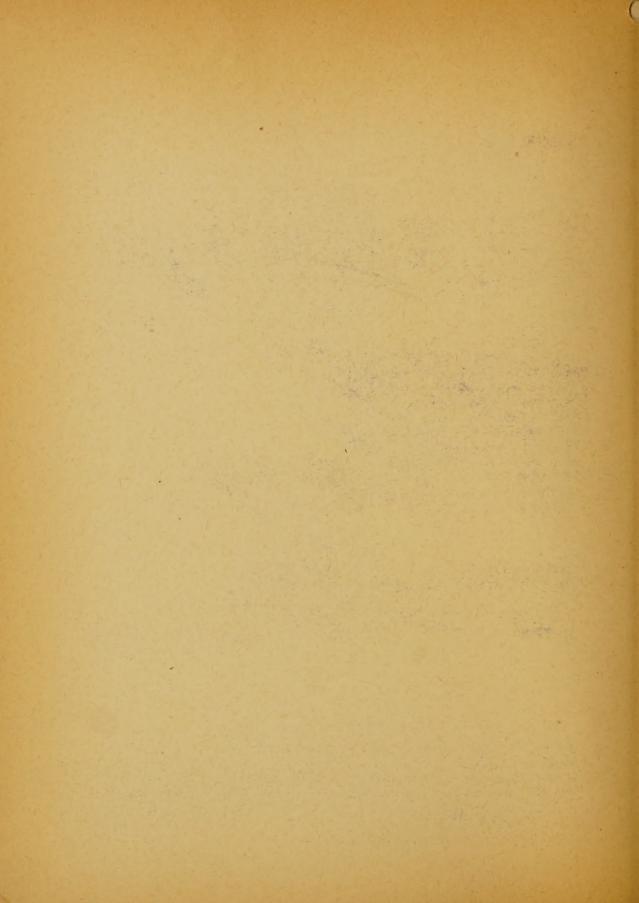

Types of tables presented. This set of tabulated data includes the following subjects: Social characteristics, tenure, size of farm and orop production, receipts, expenditures, net worth, assets, liabilities, loans, repayments, grants, and debt adjustment. These tables show what the bor rowers were like and what they did before entering the standard RR program, what they did after entry on the program and how they progressed, and what aid of a financial nature was given by FSA to implement the rehabilitation process.

Most of the tables showing what the borrowers were like and what they did before entering the program were tabulated by States or by the period in which the borrowers received their first standard loan or by both States and periods. 1/ Tables showing what the borrowers did after entry on the program and how they changed were tabulated for the Region as a whole, and by the number of crop years between the first standard loan and the time of the last record after entry on the program.

This study was directed by Olaf F. Larson. Data were transcribed in Region IV by WPA workers supervised by R. B. Lewis, project supervisor, and by Roy L. Roberts, regional supervisor. Tabulations were supervised by Franklin M. Aaronson, assisted by Dorothy F. McCamman. Roy L. Roberts assisted in the preparation of the explanatory text and Fred L. Garlock and George Y. Jarvis collaborated in various phases of the study.

^{1/} Data are also available for the Appalachian Area, which includes the counties indicated or the accompanying map. However, the Appalachian Area data are rot included with this set of tables but will be issued as an appendix.

INDEX TO TABLES WITH CONDENSED TITLES BY SUBJECTS

Table No.

Sample Studied

1. Borrowers in sample, by periods and States

2. Borrowers in sample, by number of crop years and States

3. Borrowers in sample, by periods, number of crop years and States

4. Status of borrower on February 28, 1939, by periods 5. Status of borrower on February 28, 1939, by States

Social Characteristics

6. Age and sex distribution, by periods

7. Age and sex distribution by States

8. Size of household, by pariods 9. Size of household, by States

10, Family composition

11. Age of head, by States

Tables 1, 2, and 3

More than one-fourth of the 5,743 berrowers in the sample lived in North Carolina. About one-fourth lived in Mentucky, ene-sixth lived in Tennessee, and more than one-seventh in both West Virginia and Virginia.

Over one-half of the borrowers entered the standard loan RR program during the first period covered by the study (Merch 1, 1936 to February 28, 1937); nearly ens-fourth entered the program during the second period (Merch 1, 1937 to February 28, 1933); and about one-fourth entered during the third period (Merch 1, 1938 to February 28, 1939).

Of the borrowers for whom some record of performance in farm and home activities after entry on the program was expected, a record was not available for 48 percent. The last available record of performance during the period covered by the study applied to the first crop year after the first standard loan for 26 percent of the borrowers, to the second crop year after the first standard loan for 14 percent, and to the third crop year after the first standard loan for 12 percent.

The relation between the period of the first standard loan and the crop year after the first loan to which the last period of performance applies is shown by table 3. For example, only borrowers entering the program during the first period can have a record of performance applying to the third crop year after the first loan, although some of the first period borrowers have a last record applying to the first or second crop year after the first loan or have no record of performance after entry on the program. Borrowers entering the program during the third period cannot have a record of performance except for the first crop year after the first stardard loan.

All of the 622 borrowers with records for the third crop year after the first loan had entered the program during the first period and the performance reported covers the 1938 crop. From table 3 and supplementary data it is known that of the 735 borrowers with last records for the second crop year after the first loan 322 entered the program during the early part of the first period and their performance covers the 1937 crop, 9 entered during the latter part of the first period and their performance covers the 1938 crop while 405 entered during the second period and have a record of performance which covers the 1938 crop. Of the 1,352 borrowers whose last record applied to the first crop year after the first standard loan, 572 entered the program during the early part of the first period, 11 during the latter part of the first period and have records covering the 1936 and 1937 crops, respectively;

For Administrative Use Only Rogion IV

Tables 1, 2, and 3 (Continued)

330 entered during the second period and 439 during the third period. Performance of the second period group covers the 1937 crop for 148 borrowers and the 1938 crop for 182, while all of the third period borrowers have records which necessarily portain to the 1938 crop.

Thus of the 2,710 borrowers with a record of performance after entry on the standard loan program, the last record covers the 1938 crop for 1,657 or 61 percent, the 1937 crop for 481 or 18 percent, and the 1936 crop for 572 or 21 percent.

I/ Number of crop years is determined by the interval between the date of the farm and home plan (RRIA) made out by the borrower and the county supervisor at the time of application for the first standard RR loan and the date of the last farm and home plan filled out after entry on the standard TR program.

(continued)

For Administrative Use Cnly Region IV

Table 2 (continued from preceding page)

For example, a borrower whose first plan was dated between March 1, 1936 and August 31, 1936 and whose last plan was dated between September 1, 1936 and August 31, 1937 was considered as having the last record 1 crop year after the first loan. If the same borrower's last plan were dated between September 1, 1937 and August 31, 1938, he would be considered as having the last record 2 crop years after the first loan and if the last plan were dated between September 1, 1938 and August 31, 1939, the last record would have been 3 crop years after the first loan.

2/ No record after first loan expected because first standard loan was

received after August 31, 1938.

3/ Includes 210 borrowers whose states was "paid up" or "inactive" by end of period of first standard lose and who were not subsequently enthorized another loan before February 28, 1939.

If A borrower was considered active if the amount reprid was less than the amount received from FSA and the case was not classified by FSA as inactive.

2 A borrower was considered paid up if the amount repaid to FSA equaled or exceeded the amount received, unless the case had been classified as inactive by FSA.

3/ A borrower was considered inactive if classified as such by FSA.

Note: A comparable table is also available for each State in the Region.

Eighty-six percent of the borrowers were still active at the close of the period of study (February 25, 1939); 12 percent were paid up and the balance of more than I percent were inactive. The majority of the paid up and inactive borrowers had entered the program during the first period. Four percent of all borrowers paid up luring the same period the first loan was received and did not come back for another loan.

Only 1 of the 706 paid up borrowers and 33 of the 52 inactive borrowers were liquidated by a public sale.

1/ A borrower was considered active if the emount repaid was less than the amount received from FSA and the case was not classified by PSA as inactive.
2/ A borrower was considered paid up if the amount repaid to FSA equaled or exceeded the amount received, unless the case had been classified as inactive by FSA.
3/ A borrower was considered inactive if classified as such by FSA.

Kentucky and Tennessee had about 3 times as large a proportion of paid up borrowers as did Virginia; Lorth Carolina had twice as large a proportion and West Virginia about the same percentage as Virginia. The percentage of inactive borrowers varied from about 1 percent in West Virginia, Kentucky and Tennessee to approximately 2 percent in North Carolina and Virginia. Only 81 percent of the Kentucky borrowers were active on February 28, 1939, as compared to 82 percent in Tennessee, 86 percent in North Carolina, 92 percent in Virginia and 93 percent in West Virginia.

^{1/} Male or female without spouse but with 1 or more children.

Z/ Single head only or single head and another person or persons of same sex.

Normal families, those with husband and wife, were characteristic of these standard loan borrowers, as all but 3 percent were of this type. Almost three-fourths, 74 percent, of the families were normal families with 1 or more children under 16. Forty-five percent of the families had 1 or more persons aged 16 or older in addition to the husband and wife. Nore than one third, 36 percent, contained a husband and wife, children under 16, and also persons—usually children—aged 16 or older. Less than one-tenth of the families consisted of only husband and wife.

The median age of borrowers was 43 years. Six percent were under 25 and 19 percent were aged 55 and over. Tennessee had the largest percentage of household heads under 25; West Virginia had the largest percentage aged 55 and over. West Virginia borrowers averaged the oldest, 46 years, and Tennessee and North Carolina borrowers averaged the youngest, 42 years.

Kedian grade finished by household head		6.4	7.6 :	5.7	5 6.6	5 4 7	C S T

Almost two-thirds, 64 percent, of the heads did not complete the eighth grade; about one-fourth stopped at the end of the eighth grade or stopped before completing the ninth grade; 3 percent completed at least the twelfth grade. Two percent were reported as completing 1 or more years beyond the twelfth grade. The median grade finished was 64. The Virginia borrowers had the most schooling less than 47 percent of them did not complete the eighth grade as compared with 56 to 80 percent of those in the other States. Test Virginia had almost 5 times as large a proportion of borrowers who had completed 12 or more grades as did North Carolina. The education was not reported for almost one-fifth of all the household heads; the late were most incomplete for Virginia.

Tables 33, 34, and 55

11 11

The median cash receipts during the year before the first standard loan increased 34 percent between the first and third periods, from \$277\$ to \$372. The median was \$314 for all periods combined. There was a decrease in the proportion of borrowers with cash receipts of less than \$375, from 68 percent in the first period to 61 percent in the second and to 51 percent in the third period. There was an increase in the percentage of borrowers with cash receipts of \$750 or more, from 10 percent in the first period to 11 and 13 percent in the second and third periods, respectively.

The median charge in receipts for borrowers for whom there sure the control of the progress 1, 2, and 3 years were increases of \$15, \$54, and \$69, respectively. However, 42 percent reported their entry on RR. Such a decrease was reported by 47 percent of those who had been on the program I year at the time of the last record, 39 percent of those who had been on 2 years, and 36 percent of those who had been on 2 years, and 36 percent of those and it is a fine of the last record ending between the last record ending between

The sens percent age had an increase of \$100 or more, and a mondrately the sens percentage had an increase of \$100 or more, the larger the time on the program. The smaller was the percentage of percent with a 100 or core door seas. Such a language was reported by 4, 3, and 2 percent of the borrowers on the program 1, 2, and 3 years, respectively, and the local or more pair in cash for the mass reported by 3 percent on those co. 13 , year and 5 percent of local control of the program 2 and 1 years, respectively, at the time of the last record.

Loss than one-third of the borrowers with each receipts under 9375 during the year before it reported a decrease for the act year of record on V. as oneing to this 35. It as 1.4 justy on its borrowers with receipts of \$375 or more for the same period reported a decrease during the last year of record.

Tables 38, 37, 38, and 39

The median cash receipts derived from the farm during the year before entry on RR was \$245 for those borrowers who had such farm receipts. Nearly one-fifth, 18 percent, received less than \$100 from their farm. Approximately the same percentage had farm receipts of \$500 or more. These data exclude all those with no farm receipts the year before RR because most of such borrowers had not been farm operators during this time.

For an analysis of charge in farm receipts, table 38 rather than table 37 should be studied because the data in the latter include those borrowers who had no farm receipts during the year before entry on the program and thus must show an increase in receipts from the farm.

Table 38 shows change only for those borrowers who had farm receipts during the year before entry on the program. This group had a median increase of \$33. The median changes for those on the program 1, 2, and 3 years were increases of \$13, \$50, and \$57, respectively. Fowever, 42 percent had less farm receipts in their last year of record than before coming on the R2 program. The longer the borrowers were on the program, the smaller was the proportion reporting some decrease; 47, 39, and 36 percent of those on the program 1, 2, and 3 years, respectively had a decrease in farm receipts. Two percent had a decrease of \$500 or more and 4 percent had an increase of \$500 or more. The \$500 or more decrease was reported by \$3,2, and 2 percent of those on the program \$1,2, and 3 years, respectively, while the \$500 or more gain was reported by 2, 6, and 3 percent of those on the program a comparable length of time.

The borrowers who had no farm receipts the year before the first loan had a median of \$187 for the last year of record after entry on R? according to the data in table 39. This same table shows the tendency of borrowers who previously had relatively large farm receipts to report a decrease in such receipts after entry on RR.

It was a major source for the first lead to the first lead to the for the there is a major source. It was a major source for the first lead to the for the their states, the places due to the for the their states, the places due to the forth of the first lead to the first le

After entry on RR, a ferm source was most important for 88 percent of the harrowers; the farm source predeminate 16.85, 35, and 90 percent of the harrowers on the program 1, 2, and 3 years, respectively. Crops (E percent), livestock (15 percent), and a crops-livestock continution (14 percent) were one 3 most important sources. Off-furn work was the major source for only 3 percent, and grants for less than 1 percent of the borrowers.

Table 49 shows a very slight tendency to shift into more diversified serves of law income, but on the shole the distribution of berrowers by major sources of receipts during the last year of receipt services single to the distribution the year before the first law.

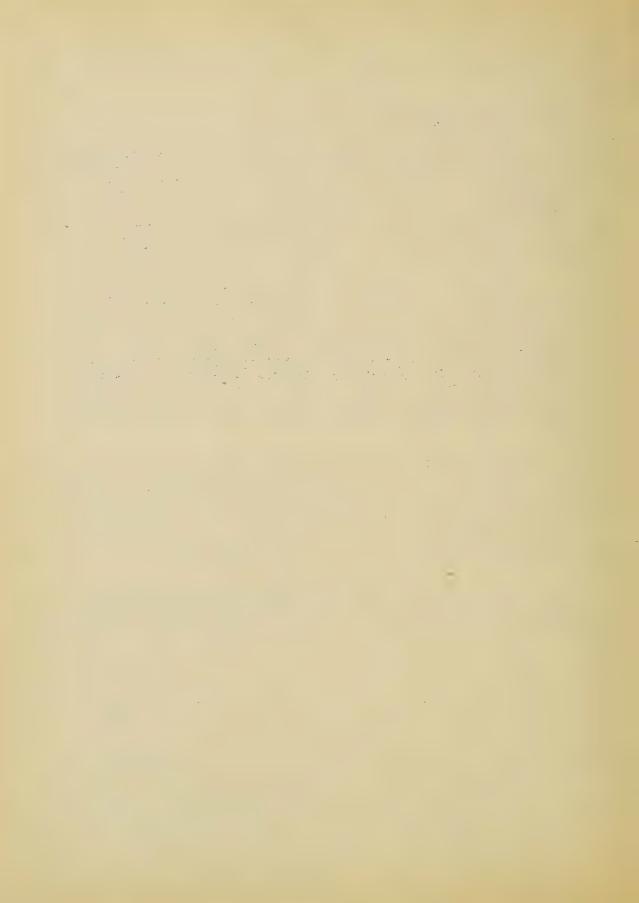

Table 46.- MAJOR SOURCE OF RECEIPTS YEAR BEFORE RR: Number and percentage of berrowers classified by source yielding 50 percent or more of easy receipts, excluding leans, during year before first standard RR loan, by period of first standard loan

first standard loun, and (e) for each State by each of the three periods of first standard loan. Note: A comparable table is also available for (a) each State in the Region, (b) for each of the 3 excluding the real estate equity usually gives a lower net worth figure. This table shows the relationship between net worth with and net worth without real estate and shows how periods of

For Administrative Use Only Region IV

Tables 72 and 73

Table 72

Over one-fourth, 28 percent, of the borrowers for whom a record was available after entry on RR had a lower net worth at the time of the last record than at the time of the first lean; 5 percent incurred a decrease of 0500 or more. Kineteen percent increased their net worth by 0500 or more. The median change was an increase of 0151. Twenty-nime percent of the first period, 28 percent of the second, and 24 percent of the third period borrowers had some decrease in their net worth by the time of their last record. The median changes were increases of 0154. Oldland 0145 for first, second, and third period borrowers, respectively. All of the third period borrowers had been on the program 1 year at the time of their last record; the majority of the second period borrowers had been on 2 years; of the first period borrowers, two-fifths had been on the program 3 years, more than one-fifth had been on 2 years, and less than two-fifths had been on 1 year.

Table 73

Thirty percent of all borrowers with any record of change since receiving the first standard loan had a lower net worth, excluding farm real estate, at the time of the last record than at the time of the first loan. This decrease was reported by 34, 27, and 23 percent of the borrowers with records 1, 2, and 3 years, respectively, after the first standard loan. Two percent incurred decreases of 5000 or more and 11 percent had increases of 5000 or more, excluding real estate. The median change for all borrowers with records was a gain of 3166 with an increase of 375 for those with records 1 year after the first loan; a gain of 3156 for those with records 2 years after the first loan, and an increase of \$206 for those with records 3 years after the first loan. The borrowers with a 1-year record ending between 9/1/35 and 3/31/37 had the smallest median increase, \$37.

^{1/} Exclusive of 3,035 borrowers with no record after entry on Theorem.

Loss than one-fifth of the borrowers for whom there was a record of chance had decreased their indebtedness since receiving their first standard loan. Such a decrease was reported for 18, 21, and 21 percent of the borrowers with records 1, 2, and 5 years, respectively, after the first loan. Hime percent had increased their liabilities by 1500 or were. Hight, 10, and 11 percent of these on the program 1, 2, and 5 years respectively had increased their liabilities by this amount. The median change in liabilities was an increase of 156 and was about the same for borrowers on the program 1, 2, and 3 years, being 130, 185, and 143, respectively.

Almost one-fourth, 24 percent, of the berrowers reported no limbilities at the time of their standard loan; the proportion changed only slightly as the program continued, being 21, 25, and 22 percent of the berrowers accepted on the program in the first, second and third periods, respectively. For almost three-fifths, 50 percent, of all the borrowers, the liabilities reported amounted to less than 40 percent of all the assets reported.

About 1 borrower in 100 had liabilities which equalled or exceeded assets; the majority of these were first period borrowers.

Note: A table is also available for each of the 3 periods of first standard loan and for all periods combined with a cross-tabulation of number of standard loans authorized a d periods during which grants were received.

Sixty-two percent of all borrowers received only 1 loan. Another 24 percent received 2 loans. Four percent received 4 or more loans. Of the borrowers who entered the program during the first period, 48 percent received more than 1 loan by February 1937. Over one-eighth, 13 percent, of the borrowers receiving their first standard loan between Earch 1938 and February 1939 obtained 2 or more leans during the 12-month period.

^{1/} Averages are based upon the number of berrowers authorized loans for the specified purposes.

2/ Includes current rent, taxes, interest, recording fees, etc.

Note: A comparable table is also available for each State in the Region.

The average amount loaned for all forms of capital goods combined, current farm operating expenses and for family expenses was less for the second than for the first period borrowers and still lower for the third than for the second period borrowers. Loans for livestock and poultry averaged more for second period borrowers than for the others. First period borrowers received about half as much for debt settlement as second and third period borrowers.

^{3/} Ircludes loans for which the purposes were not known or were not otherwise classifiable.

The second and respondence of outed of their standard titles, out by specified year during which loans were subjorised L in a military of to but with by Fr. for specified types of carried fare operating expenses,

^{1/} Exclusive of repayments scheduled to be made before period during which first standard lean was received for borrowers receiving a lean, other than standard, in an earlier period.

This table should be studied in conjunction with tables 115 and 116. It shows that practically all borrowers on the program 1 year or longer were originally scheduled to make repayments by Fobruary 1939, and that only 39 percent of those on the program less than 1 year were not scheduled to make repayments by that date. In using this table, it should be kept in mind that the data do not make allowance for any adjustments or revisions of the original repayment schedulos.

1/ Exclusive of repayments made before period during which first standard loan was received for borrowers receiving a loan, other than standard, in an earlier period.

This table, studied in conjunction with table 114, shows that 90 percent of the borrowers were scheduled to make repayments before February 28, 1939 and that 86 percent actually did make repayments. For all 3 groups first, second and third period borrowers somewhat fewer than were expected made repayments. Thirty-five percent of the percent period were expected made first period were originally scheduled to repay at least \$375 by the end of the third period, but only 18 percent repaid as much as \$375. Corresponding percentages for borrowers who began in the second period were 18 and 12 percent, and for borrowers accepted in the last period were 1.7 and 1.4 percent.
